WHAT ARE NOVATHREADS?

They are hypodermic needles with an absorbable PDO suture.

PDO ABSORBABLE SUTURE

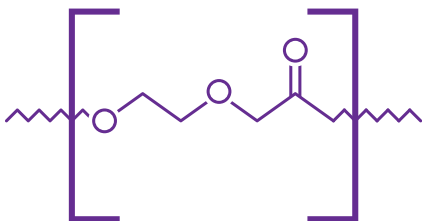

PDO is a synthetic absorbable surgical suture composed of polydioxanone. It's one of the safest materials to be implanted in the body. It's fully absorbed by hydrolysis within 4 to 6 months and doesn't create any scar tissue. Being a monofilament, PDO has fewer chances of harboring bacteria thus reducing the chance of infection.

INTRODUCING **NOVATHREADS** **BEYOND**

Our newest US-made thread features a bi-directional design with maximum grip and increased flexibility. The barbs on this thread extend the full length beyond the hub of the cannula, perfect for advanced rethreading techniques.

MADE IN USA

NOVATHREADS are pre-loaded PDO threads **made in the USA**, with the highest quality standards for manufacture and sterilization.

3-YEAR EXPIRATION

We're the only pre-loaded threads with a 36-month expiration date.

BEVEL UP INDICATOR

The bevel up indicator allows precise placement of the thread while inserted in the skin by providing a guide to the opening on the needle.

2121 SW 3rd Ave, Ste 500, Miami, FL 33129

SMOOTH THREADS

Our Smooth threads are designed to maximize the space inside the needle/cannula. This allows a thicker thread and results in a higher absorption rate.

SHARP TIPS

SMOOTH

20PCS (4X5)

SMOOTH

29G x 1"

SUTURE: 1" · 6-0 USP

29G x 1½"

SUTURE: 1¾" · 6-0 USP

27G x 2½"

SUTURE: 3⅛" · 5-0 USP

SUTURE: 1" · 6-0 USP

29G x 1½"

SUTURE: 1¾" · 6-0 USP

TWIST THREADS

Twist threads are Smooth threads that have been coiled around the needle/cannula in order to allow insertion of a longer suture than a normal smooth.

BARBED THREADS

NovaThreads Barb4 and Barb5 are blunt, pre-loaded cannulas. Barb4 has a single-angle cut design, whereas the Barb5 offers a more advanced dual-angle cut design.

MOLDED THREADS

For advanced users we offer Infinity Plus: which maximizes the space in the cannula with the thickest possible thread and the highest tensile strength of the line. And our newest Beyond: which uses a thinner strand but thicker barbs to ensure more flexibility and high grip.
